Hi there! Nice to meet you. Allow me to introduce myself. In 2015, working as a graphic designer, I was inspired to learn to code after attending a **Ladies Learning Code** workshop. I took this newfound curiosity & graduated from **HackerYou's** front-end development bootcamp in the summer of 2016. Formerly working as an email developer, I'm actively looking for new opportunities where I can use my JavaScript skills, & potentially learn new programming languages, as well. I'm enthusiastic about learning new languages, frameworks, & libraries in my own spare time. I'm currently learning React, & some of my other future goals include learning Node.js, Vue.js, & SVG animations.
